

TRANSMITTED MINOR FRAME STRUCTURE

Major frame = 32 minor frames, repeated at 64 Hz → minor-frame rate 2048 Hz

segment widths not to scale

Video: supercommutated,
30 inst. × 2 words → 61.44 kHz;
H.264, 900 kb/s/cam. (GOP 1:15, 30 fps)

Pressure: 1 word per minor frame
(2048 Hz word rate), subcommutated
among 4 UNIK 5000 transducers

64 Hz group: TCs, GNSS, barometric,
status --- and check counter; 1 word
every frame, $\Delta = +1 \pmod{2^{16}}$ (\$4.4)

With sync and SFID: 100×16 -bit words transmitted → $100 \times 16 \times 2048 = 3.2768 \text{ Mb/s}$
